Data: Kaggle open datasets on European Energy: Generation, Prices & 2030 Targets

To reach 80% by 2030, Ireland needs to increase the renewable share by 31.6 percentage points.

Ireland Share Latest	Share vs 2020 (pp)	Ireland Target Share (%)	Gap to Target (pts)	Required Pace (pts/yr)	Pace Last 5 Yrs (pts/yr)	Pace vs 2010-2015 (pp)
48.4%	6.27	80.0%	31.63	6.33	1.25	-1.70

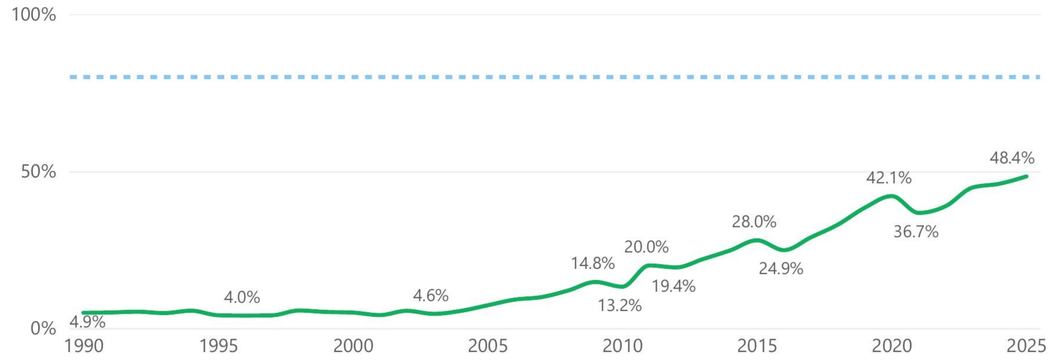

Electricity generation mix: 2025 vs 2030 plan (% of total)

Share of generation by fuel, 2025 vs the 2030 plan. Other fossil is not shown.

Ireland's renewable share, 1990-2025, vs the 2030 target

Renewables Share % by year

01 Scale wind and solar deployment: Increase the share of wind from 38.2% to 61.2% and solar from 4.8% to 15.3% by 2030, as outlined in the plan. In TWh that means wind about 2.5 times (11.8 to 29.2) and solar about 5 times (1.5 to 7.3), while total generation grows about 54%.

02 Strengthen grid and flexibility: Invest in grid infrastructure, storage and flexibility solutions to integrate higher levels of variable renewables and maintain system stability.

03 Accelerate delivery and policy support: Achieve an average increase of 6.3 percentage points per year to 2030. The last five years averaged 1.25 points a year, but 2020 was a peak; from 2021 the pace was 2.9. This needs streamlined planning, auctions and demand electrification.
